

How to Model Your Favorite Biological Network with Netflux

Jeff Saucerman (U. Virginia)

UC Davis, December 10, 2026, 3:00 to 5:00 PM, followed by a reception · GBSF Auditorium

Bring your laptop with WiFi and a cartoon image of a signaling pathway you'd like to model

- More info at: <https://tinyurl.com/davisnetflux>

Goal: To develop your own predictive computational model of a small biological network

Feel free to email Jeff Saucerman (jsaucerman@virginia.edu) or submit issues on GitHub

Agenda

Introduction (10 min)

Hands-on introduction to using Netflux using exampleNet (10 min)

Share and discuss your network schematic (10 min)

Time to work on your network model, in pairs (25 min)

Share initial progress with your model, reflection and questions on modeling biological networks

Wrap-up

Share your name and example network schematic

Jeff Saucerman

Wnt signaling in myocardial infarction. Fu et al Acta Pharmacologica Sinica (2019)

Share your name and example network schematic
